JUDINGROUP Fish tape wire size test data sheet

Testing time: 2 March 2022 **Tester:**

Test Purpose: Wire diameter testing of fish tape		
Test Object: JDNL3015	Material: nylon	Wire Diameter: 3.00mm
	Shape: orbicular	Color: white
Test Equipment: Vernier Scale		

I. Test Methods and Procedures

1、Prepare the test equipment and make sure it is calibrated accurately.

2、Remove the fish tape under test and make sure it is in a relaxed state.

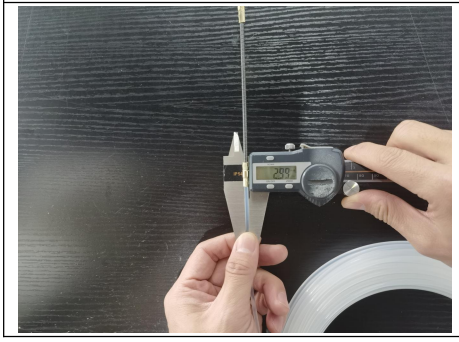
3、Using Vernier Scale, measure the diameter of the fish tape at several different locations. At least three different positions should be measured and the average value should be taken as the final result.

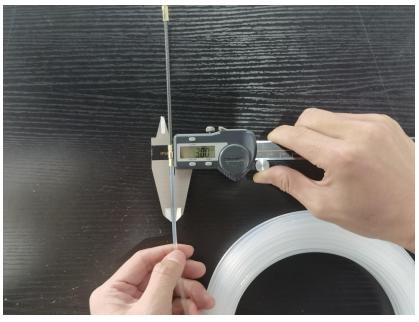
4、Record each measurement and calculate the average value.

II.Test data and Pictures

1. Product picture before test

2. Product picture and data after test





Summary of test data：
Test data 1: 2.99mm
Test data 2: 3.00mm
Test data 3: 3.01mm
Test data 4: 3.02mm
Test data 5: 3.00mm
Test data 6: 2.98mm

III. Analysis of test results

According to the test data, the average wire diameter of the fish tape was 3.00 mm. compare this result with the standard requirements for analysis.

IV.Test Conclusion

Based on our test results and comparing the standard requirements, we conclude the following:
The wire diameter of the fish tape complies with the specified values within the range of standard requirements and can be concluded as satisfactory.
