JUDINGROUP Agriculture Wire Diameter Test Data Sheet

Testing time: 2 March 2022 **Tester:**

Test Purpose: Wire diameter testing of agriculture wires		
Test Object: agriculture wires	Material: PET	Wire Diameter: 2.00mm
	Shape: orbicular	Color: black
Test Equipment: Vernier Scale		

I. Test Methods and Procedures

1.Prepare the test equipment and ensure that it is calibrated accurately.

2.Remove the agriculture wire being tested and ensure it is in a relaxed position.

3.Using a tape measure tool, measure the wire diameter of the agriculture wire at several different locations. At least three different positions should be measured and the average taken as the final result.

4.Record each measurement and calculate its average.

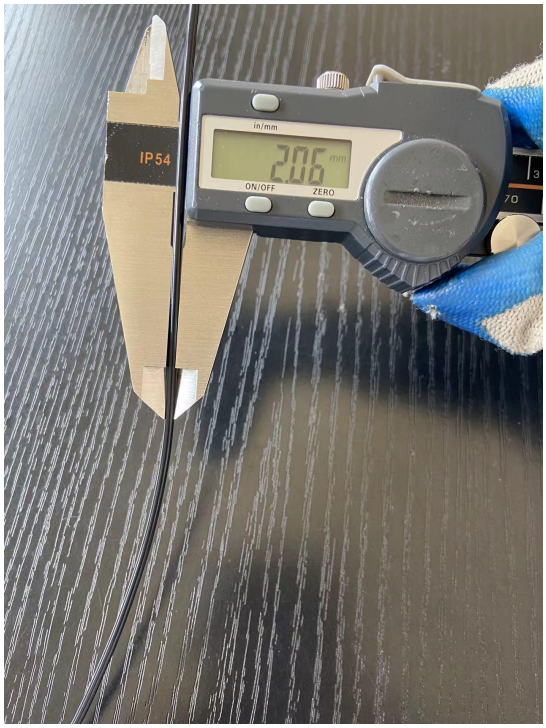

II.Test data and Pictures

1. Product picture before test

2. Product picture and data after test

Summary of test data：

Test data 1: 1.99mm

Test data 2: 2.00mm

Test data 3: 2.01mm

Test data 4: 2.02mm

Test data 5: 2.00mm

Test data 6: 2.06mm

III. Analysis of test results

Based on the test data, the average wire diameter of the agriculture wire was 2.01mm . This result was compared with the standard requirements for analysis.

IV.Test Conclusion

Based on our test results and comparing the standard requirements, we conclude the following.

The wire diameter of the agriculture wire meets the specified value within the range of the standard requirements, which can be concluded as satisfactory.
